Join DekkoSecure to see how prosecutors, CSI units, police departments, courts, and defense attorneys can securely share and manage digital evidence. Learn how DEMS unifies the justice ecosystem with one platform that reduces costs, eliminates duplication, streamlines workflows, and delivers unmatched zero knowledge end-to-end encryption.

The explosion of digital evidence has created a crisis for justice agencies. Body-worn camera footage, mobile phone extractions, FARO scans, drone video, and CCTV generate massive amounts of sensitive data. Many agencies still rely on outdated servers, thumb drives, or consumer file-sharing tools, which are insecure, inefficient, and expensive. These approaches duplicate evidence across multiple repositories, break audit trails, and expose agencies to risk.

DekkoSecure's Digital Evidence Management System (DEMS) solves these challenges by providing a unified, cloud-based platform built specifically for the justice ecosystem. DEMS enables prosecutors, investigators, CSI units, law enforcement agencies, and courts to manage evidence in one secure location. It also enables external collaboration across the justice process, such as prosecutor-to-defense discovery or CSI-to-police department sharing, without additional costs or technical barriers. Each item of evidence is stored once, with one cost, no matter how many times it is shared.

Security is uncompromising. DEMS uses true zero knowledge end-to-end encryption, ensuring only authenticated and authorized users can access data. DekkoSecure itself cannot view customer information, nor can internal IT administrators without explicit authorization. Every action is permanently logged in an immutable audit trail, maintaining a provable chain of custody from crime scene to courtroom.

The platform is file-size and format agnostic, making it possible to securely upload and share everything from terabyte-scale FARO scans to forensic extractions and high-definition video. Metadata is preserved, discovery is simplified, and tools like DekkoDrive provide lightning-fast uploads of very large files.

With DekkoSecure DEMS, the entire justice ecosystem can collaborate securely and efficiently in a single platform. This reduces redundant costs, eliminates manual processes, and provides complete confidence that sensitive evidence remains protected, discoverable, and admissible.

DekkoSecure

Mission critical data & file protection.
